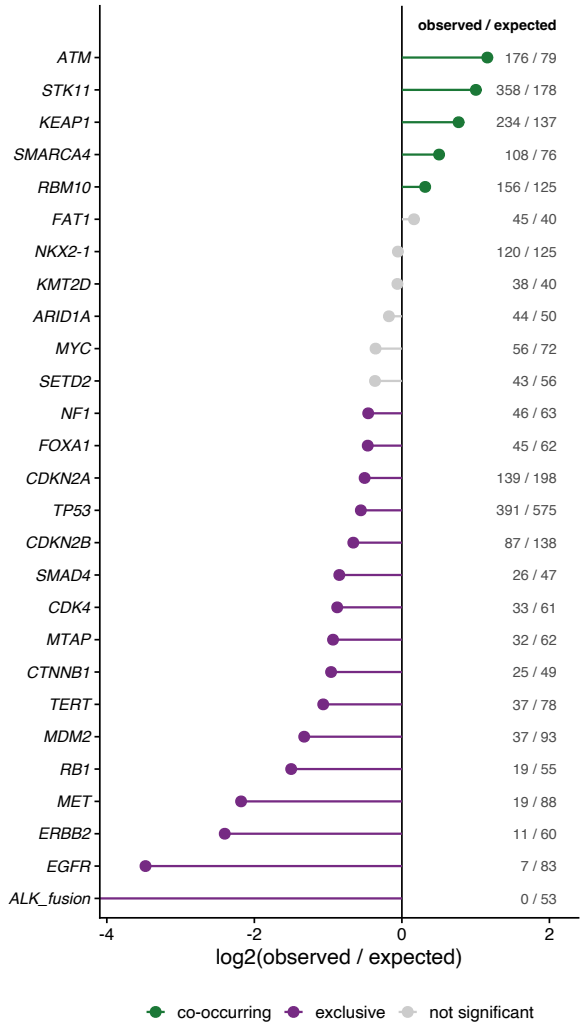
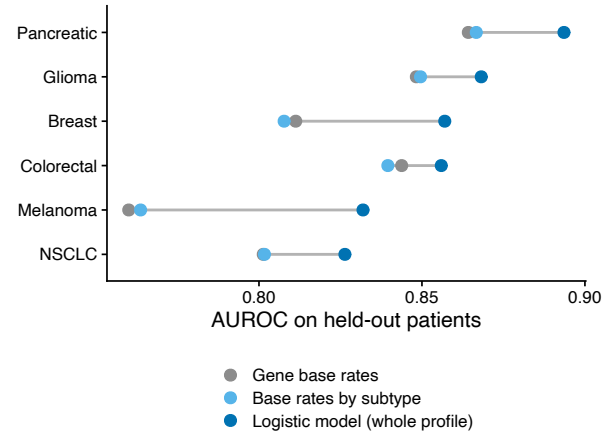
Phase 3: the lookup tool's answers -- partners, exact combinations, predictions -- hold up

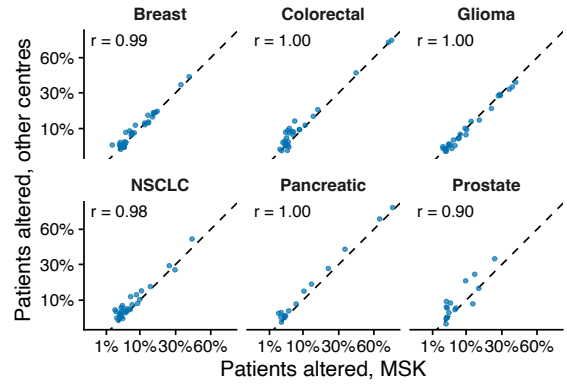
a lookup(): partners of KRAS G12C in NSCLC



b predict_partners(): beyond base rates

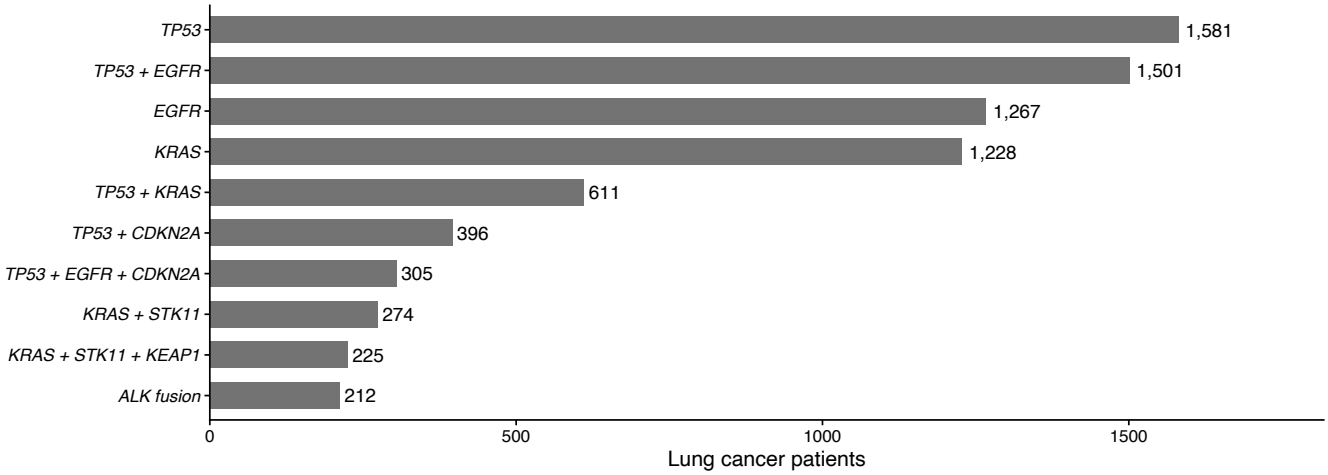


c Frequencies transfer across centres



One point per analysed gene; only patients whose panel covers the gene.

d combo_prevalence(): the most common exact combinations



Among 10,267 lung cancers with at least one of 8 drivers; each patient counted once, by their exact set.
