Phase 2b: the highest precision, and the most real links found at any given precision

a Precision: how many calls are real

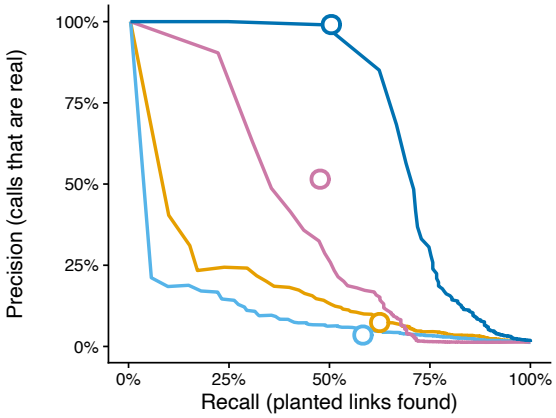

Dashed line: 95% precision, what q < 0.05 aims for.

b Recall: how many real links are found

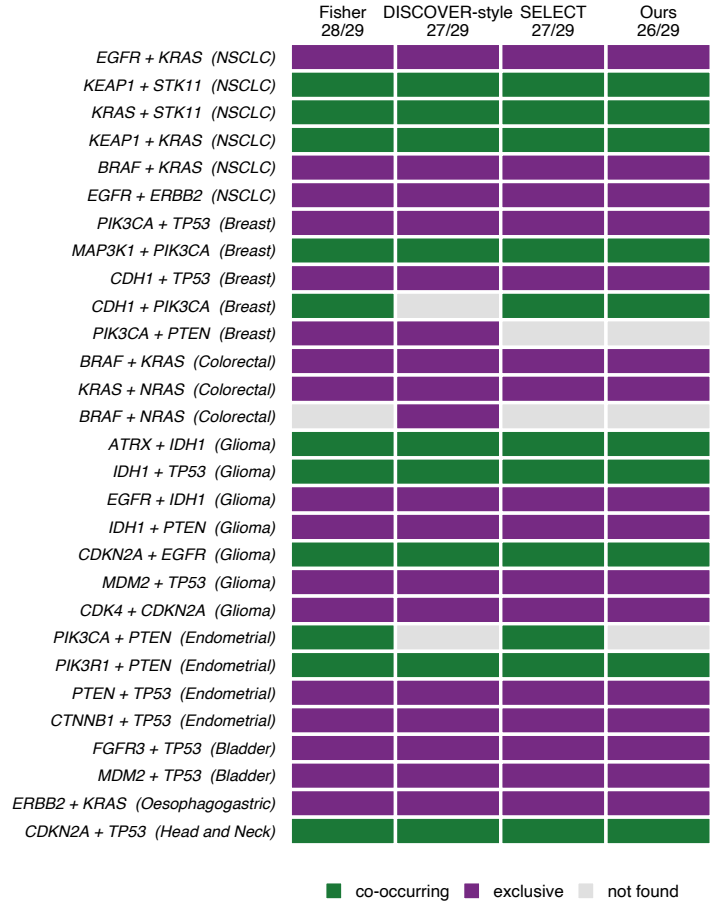

Scenario S2 (real data, links removed); colours as in a.

c Precision and recall at every threshold

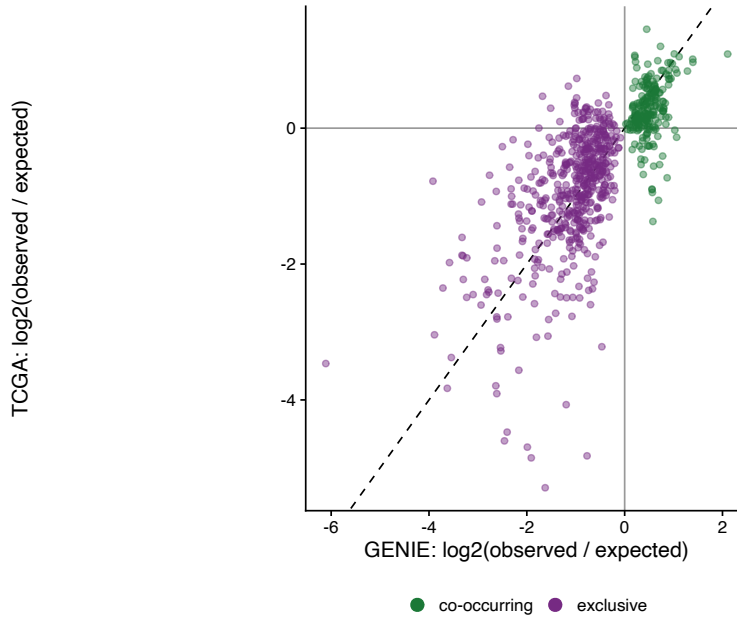

Circles: each method at its q < 0.05 cut-off. Scenario S2; colours as in a.

d Recall of textbook pairs (real data)

29 pairs with a published direction (data/curated/textbook_pairs.csv).

e Independent patients (TCGA) agree

765 candidates; Spearman rho = 0.74. Same direction: 88% (control pairs: 69%).
